SUMMARY

Senior Java engineer with 7+ years building event-driven, cloud-hosted systems for global financial institutions, including Wellington Management and Mitsubishi UFJ Financial Group. Strong in Spring Boot, Kafka, AWS and secure authentication (OAuth 2.0 / JWT), with measured results in reliability, security and delivery speed. Today I build agentic AI tooling at EPAM with Claude Code and MCP, and I hold two Anthropic Claude Architect certifications.

TECHNICAL SKILLS

Languages	Java (8 / 11 / 17 / 21), Python, TypeScript, JavaScript, SQL
Backend & data	Spring Boot, Spring MVC, REST APIs, microservices, Apache Kafka, event-driven architecture, FastAPI, Node.js, PostgreSQL, MySQL, MongoDB
Agentic AI	Claude Code, Model Context Protocol (MCP), LangGraph, LangChain, LLM tool calling, RAG (FAISS), multi-agent workflows
Cloud & DevOps	AWS (CloudFormation, CloudWatch, S3, IAM, EC2), Docker, Kubernetes, GitHub Actions, Jenkins, Azure DevOps
Security & auth	OAuth 2.0, OpenID Connect, JWT, API gateway, Nginx (njs), Snyk
Frontend	React.js, Angular, TypeScript
Testing & ops	JUnit, Mockito, JMeter, Datadog, production support; also used: GraphQL, gRPC, Jersey

WORK EXPERIENCE

Senior Software Engineer, Java & Agentic AI · EPAM Systems — Feb 2024 – Present

Gurugram, Haryana, India (Remote)

- Built an agentic Java 8 to Java 21 migration system with Claude Code and MCP servers: agents run dependency analysis, refactoring, build-config updates and regression-test validation.
- Led the migration from legacy session tokens to OAuth 2.0 / JWT across 8+ services, removing session-fixation vulnerabilities and cutting auth-related support incidents by 35%. Built the Nginx (njs) gateway that validates JWTs, with a zero-downtime cutover.
- Moved 12+ CI/CD pipelines to GitHub Actions (+30% reliability, 18 minutes off build time) and added Snyk security gates that resolved 40+ critical and high CVEs, cutting security review time by 50%.
- Built multi-agent developer-tooling workflows and drove team adoption: boilerplate authoring time down 40%, test scaffolding 2x faster.

Associate Technology, Java Full Stack · Publicis Sapient (client: Wellington Management) — Sep 2021 – Jan 2024

Gurugram, Haryana, India

- Architected decoupled microservices on Apache Kafka for asynchronous, event-driven processing in high-throughput financial data pipelines for derivatives trading.
- Built 6 greenfield applications with Spring Boot and React.js on AWS (CloudFormation, S3, CloudWatch), with 99.9% uptime across production services.
- Built a real-time health monitoring dashboard covering 20+ hosted services, reducing mean time to detection of outages by 60%.
- Developed a data-driven React.js UI framework for financial instrument setup, reducing configuration time per instrument from 3 days to under 4 hours.

Software Engineer, Java Full Stack · Capgemini (client: Mitsubishi UFJ Financial Group) — Jun 2019 – Sep 2021

Pune, Maharashtra, India · promoted to Senior Software Engineer (Jun 2020) and Associate Consultant (Jun 2021)

- Extended the Fenergo CLM platform with 50+ dynamic field configurations and validation rules for regulatory compliance across 15+ onboarding jurisdictions in APAC and EMEA.
- Built Trade Finance screens in Angular on vendor REST APIs, delivering 8 product workflows that process 500+ trade transactions a month.
- Managed SQL lookup tables and data validation across 30+ regulated financial data entities, with zero data-quality incidents in production.

SELECTED PROJECTS

Fin Expert — multi-agent financial assistant Python · FastAPI · React · LangGraph · FAISS
Six specialist agents (Q&A, portfolio, market, goals, news, tax) with FAISS retrieval that returns cited answers, plus SQLite session memory. github.com/MohdShoeb13/fin-expert

ContentBlitz — multi-agent content workspace Python · FastAPI · React · LangGraph · SSE
Five routed agents (research, strategy, SEO blog, LinkedIn, image) with token streaming, a provider-agnostic LLM registry (OpenAI, Anthropic, Gemini) and SQLite checkpointing. github.com/MohdShoeb13/content-blitz

Resonant — call intelligence with evidence-linked summaries Python · FastAPI · React · LangGraph · Whisper
Conditional pipeline (intake, transcription, summarization, quality scoring) that turns support calls into summaries linked to evidence, with provider retries and fallback. github.com/MohdShoeb13/call_summarizer_agents

EDUCATION

M.Tech, Software Systems · BITS Pilani, Rajasthan 2020 – 2022
B.Tech, Mechanical Engineering · Dr. A.P.J. Abdul Kalam Technical University 2013 – 2017

CERTIFICATIONS

Anthropic	Claude Certified Architect – Professional (2026) · Claude Certified Architect (2026)
OpenAI	Technical Practitioner · Codex Solutions Practitioner · Cyber Solutions Practitioner (2026)
Google	Certified Partner Specialist, Gemini Enterprise Agent Development (2026)
Cloud & Java	AWS Certified Developer – Associate · Oracle Certified Associate, Java SE 8 · GitHub Actions
