MOHAMMAD SHOEB

Agentic AI Engineer | Senior Java Full Stack Developer

New Delhi, India | +91 7065279938 | shoebmohd13@gmail.com | linkedin.com/in/mohd-shoeb | github.com/MohdShoeb13 | mohammad-shoeb-portfolio.vercel.app

SUMMARY

Agentic AI Engineer and Senior Java Full Stack Developer with 7+ years building scalable, secure enterprise systems and autonomous, agent-driven workflows for global financial institutions. Specialized in multi-agent systems with LangGraph, LangChain, AutoGen, and CrewAI — orchestrating LLM tool-calling, stateful reasoning, and Model Context Protocol (MCP) integrations — with hands-on LLM fine-tuning and quantization (LoRA, QLoRA). Strong foundation in Java, Spring Boot, microservices, Kafka, AWS, and CI/CD automation, with a proven record of shipping production-grade agentic pipelines and measurable gains in reliability, security, and delivery velocity.

TECHNICAL SKILLS

Agentic AI & Orchestration: LangGraph, LangChain, AutoGen, CrewAI, AWS Bedrock, Amazon Bedrock AgentCore, Multi-Agent Systems, Agent Orchestration, LLM Tool-Calling / Function Calling, Stateful Conversation Flows, Model Context Protocol (MCP), RAG

LLM Fine-Tuning & Optimization: Quantization (LoRA, QLoRA), Prompt Engineering, Model Evaluation, Provider-Agnostic LLM Registries (OpenAI, Anthropic, Gemini)

AI Tooling: Claude Code, Cursor, GitHub Copilot, LLM APIs, Vector Search, SSE Streaming, Obsidian (Knowledge Graph / LLM Context Wiki)

Languages: Python, Java (8 / 11 / 17 / 21), TypeScript, JavaScript

Frameworks: Spring Boot, Spring MVC, Jersey, FastAPI, Angular, React.js, Node.js

Databases & Messaging: MySQL, PostgreSQL, MongoDB, SQLite, Redis (exposure); Apache Kafka, event-driven & asynchronous architecture

Cloud & DevOps: AWS (Bedrock, CloudFormation, CloudWatch, S3, IAM, EC2), Docker, Kubernetes, GitHub Actions, Jenkins, Azure DevOps, CI/CD

Security & Auth: OAuth 2.0, OpenID Connect (OIDC), JWT, Nginx (njs), Snyk, API Gateway

Other: Git, gRPC, GraphQL, JUnit, Mockito, JMeter, Datadog, Prometheus (exposure)

WORK EXPERIENCE

Senior Software Engineer — Agentic AI & Java Full Stack
Feb 2024 – Present

EPAM Systems, New Delhi, India

- Designed and shipped an autonomous, agentic Java 8 → Java 21 migration system using Claude Code orchestrated through MCP servers, with agents performing dependency analysis, refactoring, build-config updates, and regression-test validation with minimal human intervention.
- Built multi-agent developer-tooling workflows decomposing engineering tasks across specialized agents (analysis, code generation, test scaffolding, validation), integrating LLM tool-calling and MCP-based context sharing to automate end-to-end software changes.
- Drove org-wide adoption of agentic AI tooling, cutting boilerplate authoring time by 40% and accelerating test scaffolding 2x, and established prompt patterns and guardrails for reliable agent behavior.
- Led migration from legacy session tokens to OAuth 2.0 / JWT across 8+ services, eliminating session-fixation vulnerabilities and reducing auth-related support incidents by 35%.
- Migrated 12+ CI/CD pipelines to GitHub Actions (+30% reliability, −18 min build time) and added Snyk security gates that resolved 40+ critical/high CVEs, cutting security review time by 50%.

Associate Technology — Java Full Stack
Sep 2021 – Feb 2024

Publicis Sapient (Client: Wellington Management), New Delhi, India

- Architected decoupled microservices using Apache Kafka for asynchronous, event-driven processing, supporting high-throughput financial data pipelines for derivatives trading.
- Built 6 greenfield full-stack applications using React.js and Spring Boot on AWS (CloudFormation, S3, CloudWatch), achieving 99.9% uptime across production services.
- Developed a data-driven React.js UI framework for financial instrument setup, reducing per-instrument configuration time from 3 days to under 4 hours.
- Built a real-time application health monitoring dashboard covering 20+ hosted services, reducing mean time to detection (MTTD) for outages by 60%.

Software Engineer — Java Full Stack
Jun 2019 – Sep 2021

Capgemini (Client: Mitsubishi UFJ Financial Group), New Delhi, India

- Extended the Fenergo CLM platform with 50+ dynamic field configurations and validation rules, ensuring regulatory compliance across 15+ onboarding jurisdictions in APAC and EMEA.
- Developed high-complexity Trade Finance screens using Angular and vendor REST APIs, delivering 8 product workflows processing 500+ trade transactions per month.
- Managed SQL-based lookup tables and enforced data validation across 30+ regulated financial data entities, maintaining zero data-quality incidents in production.

PROJECTS

ContentBlitz — Multi-Agent AI Content Marketing System | LangGraph · LangChain · FastAPI · React · OpenAI/Anthropic/Gemini

- A five-agent routed content workspace (Deep Research, Content Strategist, SEO Blog Writer, LinkedIn Writer, Image Generator) with token-streaming SSE, a provider-agnostic LLM registry (OpenAI/Anthropic/Gemini), and SQLite checkpointing. github.com/MohdShoeb13/content-blitz

Fin Expert — Multi-Agent Financial Education Assistant | React · FastAPI · LangGraph · FAISS · MCP

- A six-agent LangGraph workspace (Finance Q&A, Portfolio, Market, Goals, News, Tax) routing each query to a specialist, with FAISS + MiniLM retrieval for cited answers and SQLite session memory. github.com/MohdShoeb13/fin-expert

Resonant — Call Intelligence & Evidence-Linked Summaries | React · FastAPI · LangGraph · Whisper · SQLite

- A conditional LangGraph pipeline (intake → transcription → summarization → quality scoring) turning support recordings/transcripts into evidence-linked summaries and next steps, with Whisper transcription and provider retries/fallback. github.com/MohdShoeb13/call_summarizer_agents

Email Assistant — Multi-Agent Writing Workflow | React · FastAPI · LangGraph · SSE · Pydantic

- A seven-agent LangGraph workflow (parsing, intent detection, tone styling, personalization, drafting, review/validation, routing) drafting and revising emails against a checkable tone contract, with a bounded review loop and live SSE streaming. github.com/MohdShoeb13/email_assistant

Obsidian Knowledge Graph — LLM Context Wiki | Obsidian · Markdown · Knowledge Graph · LLM Prompting

- Built a personal knowledge-graph wiki in Obsidian to persist project context, architecture notes, prompt patterns, and decision history as interlinked Markdown notes, letting Claude Code and other LLM assistants pull relevant context directly from the graph instead of re-explaining it each session — cutting daily context re-establishment time and improving productivity.

Autonomous Java 8 → 21 Migration Workflow | Claude Code · MCP Servers · Java 21 · GitHub Actions

- Created a fully autonomous, agentic migration pipeline using Claude Code orchestrated through MCP servers, automating dependency analysis, API refactoring, build-configuration updates, and regression-test validation to upgrade Java 8 projects to Java 21 with minimal human intervention.

Nginx (njs) JWT Authentication Gateway | Nginx · OAuth 2.0 · JWT · Snyk · GitHub Actions

- Engineered custom Nginx (njs) authentication middleware handling JWT validation and session enforcement at the API gateway level, replacing legacy session-based auth via a 100% zero-downtime cutover to stateless OAuth 2.0.

EDUCATION

M.Tech in Software Systems — BITS Pilani, Rajasthan Jul 2020 – Jul 2022

B.Tech in Mechanical Engineering — Dr. A.P.J. Abdul Kalam Technical University Jul 2013 – Jul 2017

CERTIFICATIONS

- Claude Certified Developer – Foundations — Anthropic
- Claude Certified Architect – Professional — Anthropic
- OpenAI Technical Practitioner — OpenAI
- Codex Solutions Practitioner — OpenAI
- Certified Partner Specialist — Gemini Enterprise Agent Development — Google
- Nvidia Certified Gen AI LLM Associate — Nvidia
- AWS Certified Developer – Associate — Amazon Web Services
- Oracle Certified Associate, Java SE 8 Programmer — Oracle
- GitHub Actions Certification — GitHub
